The Artemis Project

a free, five-week summer day
camp for rising 9th grade girls
in the Providence area who are
interested in learning about
science and technology

What is the Artemis Project?

The Artemis Project is a free, five-week summer day camp for rising 9th grade girls in the Providence area who are interested in learning about science and technology. Traditionally, it has been run by four undergraduate women from Brown University in connection with Brown's Computer Science Department.

By teaching students computer skills, programming, and computer science concepts through engaging activities, the Artemis Project encourages young women to join the field of computer science.

By the end of the camp, we hope that all of the students will find that they will have been exposed to a wide variety of new technologies and concepts that are prominent in the fields of science and technology. We will introduce creative ways of thinking and new problem solving techniques that the students can apply in whatever field they choose to study. In addition, we hope that the Artemis Project will make a positive impact on the way that young women think about science and technology.

When/where does Artemis take place?

This year's Artemis 2014 camp will be held from June 25th to July 30th. We will meet on the Brown University campus, in the Computer Science building (the CIT), which is located at 115 Waterman St. We will meet Monday through Friday from 9 a.m. - 3 p.m.

What will we learn?

We will spend part of each day in a computer lab, learning computer literacy through the use of programs such as Microsoft PowerPoint and Adobe Photoshop, or learning the basics of computer programming through web design in HTML and CSS, and languages like Scratch and Python. We will also spend part of each day in a classroom, where students will be introduced to the more theoretical aspects of computer science. During this portion of the day, we will cover topics such as Cryptography and Artificial Intelligence through games and other hands-on activities.

What else will we do at camp?

In addition to learning about computers and computer programs, we will also do many fun things outside of the computer lab! Wednesdays will be our weekly field trip days, when we will visit different museums in Boston and go to the Wheeler School Ropes Course. We will also have guest speakers, like Brown computer science professors, prominent women in computer science, and more!

Part of each day will also be spent outdoors: some activities may reinforce concepts you learn in the classroom and some will just be things like field days and a tour of Brown! At the end of the five weeks, all the students will have made something that they are proud of. There will be a chance for all of them to show off their work to their families and to Brown faculty members!
